

PARTNERS WIN WITH GTT

World-class connectivity, network security and managed services with dedicated channel expertise

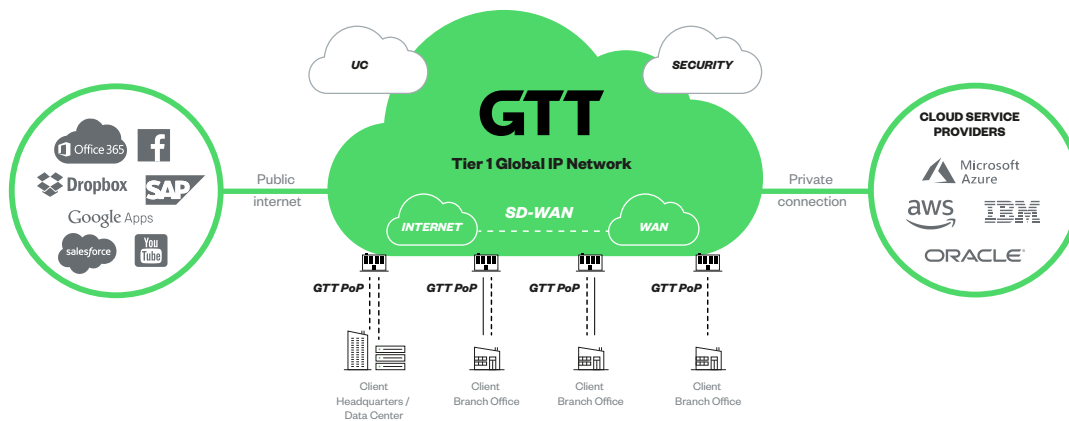

GTT is committed to supporting our partners with world-class solutions, global reach and operational excellence to drive more revenue and build customer loyalty.

Managed SD-WAN

GTT Managed SD-WAN solutions optimize connections, expand access to the cloud, improve application performance and securely transport traffic across your WAN (Wide Area Networking).

Secure Connect

Cloud based applications and hybrid work environments need an elevated, scalable security posture. GTT Secure Connect integrates Managed SD-WAN with cloud-based cybersecurity, the foundation for a SASE-based framework. Pair Secure Connect with **GTT DDoS** and **MDR** to create a cybersecurity safety net.

GTT DDoS Solutions

DDoS Protection is a fully managed service providing systems, processes, and expertise to stop DDoS (Distributed Denial of Service) attacks. DDoS Protection is deployed on the edge of the GTT Tier 1 IP backbone, so as traffic enters from the internet, scrubbing centers immediately analyze and block DDoS traffic from entering your network without impeding the flow of clean traffic.

Managed Detection and Response (MDR)

GTT MDR service provides customers with remotely delivered modern Security Operations Center (SOC) capabilities to rapidly detect, analyze, investigate and respond to threats that have bypassed traditional security controls.

Managed Services

GTT offers Managed Services most solutions in the portfolio. We apply technical expertise, operational excellence, and established governance to manage complex infrastructures.

Wide Area Networking

GTT WAN services offer class of service prioritization and secure connectivity to leading cloud service providers. **MPLS** is the highest-quality, scalable connectivity and GTT-managed routing and IP addressing for predictable traffic LAN delivery. **VPLS** merges the simplicity of Ethernet and security of MPLS for secure, reliable point-to-point connectivity in a range of speeds.

Voice Services

SIP Trunking offers cost-effective, enterprise quality calling across the globe connecting to Cloud Phone Direct providers such as Cisco Webex Calling, Zoom Phone and Microsoft Teams.

Internet Services-

Dedicated Internet and IP Transit

High quality, resilient connectivity, peering with all major networks with a global Tier 1 IP backbone.

THE GTT DIFFERENCE

- Secure global connectivity and network performance and agility for people, places, applications and clouds.
- Diverse cloud networking services: SD-WAN to global internet and security services, GTT's wide portfolio of cloud networking services gives you options for your client's needs.
- Leading global Tier 1 IP Network: Leverage worldwide reach and guaranteed performance over our Tier 1 IP network.
- Customer-first philosophy: GTT is committed to delivering an outstanding customer experience and operational excellence with global NOCs and SOCs for 24/7/365 coverage.
- Industry leading SD-WAN delivers global networking, a comprehensive portfolio of access options and secure end-to-end access to leading cloud service providers.
- Dedicated channel expertise: in-region channel managers, solutions architects, partner response coordinators, project managers, and marketing support.

OUR GLOBAL NETWORK

Our network of supplier relationships delivers diverse access to any location across the world or application in the cloud.
