

GTT Accelerates Customer and Partner Automation with New GTT Envision APIs

GTT's RESTful APIs simplify global service assurance for enterprises and accelerate quoting and procurement workflows for wholesale customers and TSD partners.

Arlington, Va., Aug. 5, 2026 — [GTT Communications Inc.](#), a leader in networking and security as a service for multinational organizations, today expanded API access across GTT Envision, making it easier for enterprise and wholesale customers and Technology Services Distributor (TSD) partners to integrate GTT capabilities into their existing systems and workflows. GTT Envision delivers [connectivity](#), [managed networking](#), [security](#), [cloud](#), [voice](#) and [professional services](#) as a unified networking, security and digital customer experience underpinned by GTT's global Tier 1 backbone.

Adhering to REST standards and building on GTT's existing API capabilities, GTT now offers enhanced APIs for service assurance ticketing for all GTT products and services, as well as two quoting APIs for high-volume connectivity products such as broadband, 5G Fixed Wireless Access and dedicated internet access (DIA) designed for TSDs and wholesale markets.

"Enterprises, wholesale providers and TSDs need automation and management tools that help run their infrastructure operations at accelerated speeds to be able to quickly adapt to changing needs and business drivers," said Tom Major, Senior Vice President Product Management, GTT. "The enhanced GTT Envision APIs provide enterprise customers simplified global incident and service request management, while wholesale providers and TSDs receive real-time access to our AI-enhanced quoting tool. The solution offers address validation across 11 million serviceable business addresses and last mile access options from more than 3,000 connectivity partners."

Gartner® notes that, "Network automation adoption in the enterprise lags that of server automation, as more than 60% of enterprise networking activities are performed manually. Limited network automation creates avoidable bottlenecks in provisioning and in incident resolution, while increasing the likelihood of human errors."¹

Drawing on more than two decades of experience integrating and managing global networks across six continents, GTT designed these new API capabilities to support and simplify the automation of networking management across multiple vendors and service types.

The new GTT Envision APIs include:

- ***Service Assurance Ticketing API for a simplified global incident and service request management***
 - Helps customers create, read, update and monitor incident and service request tickets directly from within their existing systems
 - Offers complete ticket visibility, built-in governance and the ability to respond in real time through webhooks
 - Supports all GTT services, including managed networking, security, cloud and professional services

- ***TSD and Wholesale Quoting APIs to speed up connectivity quoting***
 - Helps partners with instant quote creation and configuration and keeps information continuously synchronized between their own systems and GTT Envision
 - Leverages the GenAI-powered address validation from GTT EnvisionDX across 11 million serviceable business addresses and site options from more than 3,000 connectivity partners to deliver accurate and confirmed pricing
 - Supports TSD quotes for broadband, 5G Fixed Wireless Access and DIA
 - Supports wholesale partner quotes for broadband, 5G Fixed Wireless Access, Ethernet and DIA

Developers can access comprehensive documentation, resources and setup guides at the [GTT Developers Hub](#) to begin integrating GTT Envision capabilities with existing business system workflows.
