

GTT Envision Platform Delivers a Single, Simplified Global Networking and Security as a Service Experience

GTT Envision breaks traditional networking paradigms to enable and optimize business connectivity, ensure network security, and simplify the growing complexity global enterprises face when managing a distributed network.

Arlington, Va., September. 24, 2024 — [GTT Communications Inc.](#), a leading networking and security as a service provider for multinational organizations, announced the launch of GTT Envision, a single global technology platform to connect, orchestrate, virtualize and automate enterprise networks. Built on one of the largest global Tier 1 backbones, GTT Envision enables enterprises to solve their most complex networking and security challenges by simplifying the orchestration and management of global security, cloud and networking solutions.

“With the rapid growth of data traffic, increased traffic distribution, and the evolving threat landscape, enterprises must be able to simply and securely connect people and machines to data and applications anywhere in the world,” said Ed Morche, CEO, GTT. “GTT Envision delivers a unified approach to network and security management, providing enhanced visibility, insight, orchestration and control through a single partner, platform and digital experience. Moving forward, GTT Envision will enable us to usher in a new era of simplicity and deliver greater technology together with our customers across the globe.”

The GTT Envision platform combines the technology of EnvisionCORE and EnvisionEDGE for the virtual deployment of orchestrated network functions anywhere. This is managed, customized and controlled through a single digital experience with EnvisionDX. With robust interoperability and extensive API support, GTT Envision delivers the flexibility, integration capabilities and scalability that enterprises need to evolve and simplify their networks.

“Service Providers like GTT have the potential to offer enterprises the most comprehensive Network-as-a-Service solutions for the future of cloud networks, offering greater connectivity options based on application needs,” said Malcolm Rogers, Senior Analyst, GlobalData. “NaaS is growing and increasingly sold by providers such as GTT alongside networking and security solutions like SD-WAN, SSE, SASE and DDoS. When bundled into unified platforms, these services can feature deeper visibility and automation of data across the network, cloud and security layers leveraging analytics and AI technologies.”

The GTT Envision platform comprises:

EnvisionCORE:

- GTT’s global internet backbone and distributed compute platform with 25 sites deployed across six continents enabling end-to-end service virtualization.
- GTT’s recent enhancements to EnvisionCORE include deeper software-defined networking capability in the U.S. with the opening of three additional Network Function Virtualization (NFV) nodes in Seattle, Denver and Atlanta.
- GTT has also expanded its global footprint with new points of presence in Laredo, Texas, and Lisbon, Portugal, increasing customer connectivity options to and from adjacent markets and inter-continental destinations.

EnvisionEDGE:

- GTT simplifies the delivery of networking, security and cloud access with a suite of managed customer premise devices for the deployment of software-defined networking, virtualized security and cloud compute functions in conjunction with connectivity from its 2,600 global access partners.
- GTT allows customers to use the same device to deploy networking and security functions, including SD-WAN, Dedicated Internet Access routing and Managed Firewall, providing a consistent physical infrastructure and management plane.
- GTT provides agility and adaptability by allowing customers to continuously add and change networking and security functionality without the need to 'rip-and-replace' the premise device.

EnvisionDX:

- GTT's single digital gateway offers a managed networking experience that places customers' networking and security functions at their fingertips to facilitate capabilities such as application performance optimization and network and security policies across the entire enterprise.
- In the coming months, GTT will offer a new AI engine that delivers actionable data and insights supporting stronger rules-based control, visibility and engagement.
- In addition, customers will be able to compose and deploy their connectivity, networking, security and cloud solutions on demand through the digital gateway with assured integration, control and observability.

"GTT Envision breaks traditional paradigms in how enterprises consume networking, cloud and security," said Fletcher Keister, Chief Product and Technology Officer, GTT. "Our technology evolves the edge to finally match the 'as a service' flexibility enterprises are used to from cloud computing platforms. The GTT Envision platform helps businesses consistently deploy and manage connectivity, security, cloud and networking functions in real-time, wherever needed. We wrap this global capability with our people and expertise, partnering with our customers to deliver on their secure networking goals and strategic business outcomes."

GTT offers a comprehensive suite of [Professional Services](#) from experienced and certified professionals to support and advise enterprises throughout the design, build and running of their services, complementing and accelerating the capabilities of in-house IT teams.

About GTT

GTT is a leading networking and security as a service provider for multinational organizations, connecting people and machines to data and applications – anywhere in the world. We serve thousands of organizations, bringing together the right people, partners and technology to reduce the burden on IT teams and solve the most pressing networking and security challenges. Built on our top-ranked global Tier 1 network, the GTT Envision platform provides visibility, insights, orchestration and control, enabling customers with consumable solutions to achieve business missions and meet ongoing demand when, where and how needed. Our portfolio includes SASE, SD-WAN, security, internet, voice and other connectivity options, complemented by a suite of professional services and exceptional sales and support teams in local markets around the globe. We partner with our customers to deliver Greater Technology Together. www.gtt.net.
