

GTT EnvisionDX Accelerates Quoting for Secure Networking with Real-Time Pricing Available for 11 Million Global Locations

Enterprises can now get global pricing in minutes as GTT continues to simplify and automate complex network and security services.

Arlington, Va., May 12, 2026 — [GTT Communications Inc.](#), a leader in networking and security as a service for multinational organizations, today released the next generation of the GTT Envision platform digital experience, [GTT EnvisionDX](#). Serving as the gateway for GTT customers to easily manage their services, GTT EnvisionDX has been enhanced with a range of new features, including enabling real-time quote and order generation for networking and security services at millions of validated business sites across the globe.

“Traditionally, quoting for new networks or adding new sites to networks was a time-intensive process — often taking weeks — due to the need to verify location information, site requirements, and associated hardware, labor and service costs across multiple vendors,” said James Eibisch, Research Director, Enterprise Communications Services, IDC. “By building rapid and automated quote generation based on customer inputs and validated through GenAI analysis into GTT EnvisionDX, GTT is solving a significant and expensive pain point in minutes for global enterprises managing complex networks.”

Organizations juggling multiple networking and security services and vendors can face fragmented visibility, siloed systems and limited options for customization and control. Adopted by over 90% of GTT’s global customer base, GTT EnvisionDX also directly addresses these pervasive issues through site-level visibility. New enhancements to the intuitive, site-centric design of GTT EnvisionDX enable customers to seamlessly connect, visualize, engage and manage a range of networking services with ease, unlike traditional solution-centric platforms, which require users to jump between portals for DIA, SD-WAN or security services.

New GTT EnvisionDX features include:

- **On-demand quoting and ordering for single sites or multiple sites in bulk** with easy-to-access digital terms and conditions, real-time pricing and efficient processing, enabling cost transparency and optimization.
- **GenAI-powered address validation** for accurate, multisite location information in real time.
- **Easy creation of new networks** and addition of new sites to existing networks via advanced geospatial search capabilities. GTT has more than 11 million serviceable business addresses in its system and more than 3,000 connectivity partners, enhancing quote automation and speed.
- **Secure, seamless access from anywhere** via Active Directory, secure SSO, Bring Your Own Identity and two-factor authentication.
- **Enhanced site visibility** includes performance metrics, assets, software, hardware, spend, connectivity and event information for both individual sites and multisite deployments.

- **Designed for both users and systems**, an API-first approach enables GTT customers to embed GTT EnvisionDX features into their own tools and systems.

“Our latest enhancements to GTT EnvisionDX are a direct result of feedback from and collaboration with our global user base,” said Tom Major, Senior Vice President, Product Management and Technology, GTT. “We are helping enterprises accelerate their operations with an intuitive and comprehensive user experience for managing, purchasing and customizing their networks all in one place.”

The new GTT EnvisionDX enhancements are available to GTT customers now. [Click here](#) for more information.

About GTT

GTT is a leading networking and security as a service provider for multinational organizations, simply and securely connecting people and machines to data and applications — anywhere in the world. We serve thousands of organizations, bringing together the right people, partners and technology to reduce the burden on IT teams and solve the most pressing networking and security challenges. Built on our highly ranked global Tier 1 network, GTT Envision is a single global technology platform to connect, orchestrate, virtualize and automate enterprise networks, enabling customers with consumable solutions to achieve business missions and meet ongoing demand when, where and how needed. Our portfolio includes SASE, SD-WAN, security, internet, voice and other connectivity options, complemented by a suite of professional services and exceptional sales and support teams in local markets around the globe. We partner with our customers to deliver Greater Technology Together. For more information, please visit www.gtt.net.
