

GTT ENVISIONDX

Manage, customize and control every aspect of your network

Organizations today work with multiple vendors to simply and securely connect sites, people, machines to data and applications anywhere in the world. In many cases, distributed enterprises can have a half dozen vendors or more working on network and security solutions.

While it's important to have a robust network and security plan, having too many vendors can often lead to needless complexity and lost opportunities and greater risk, such as lapses in supply chain, missed communications, security gaps and the inability to scale due to the incompatibility of the systems or binding contracts.

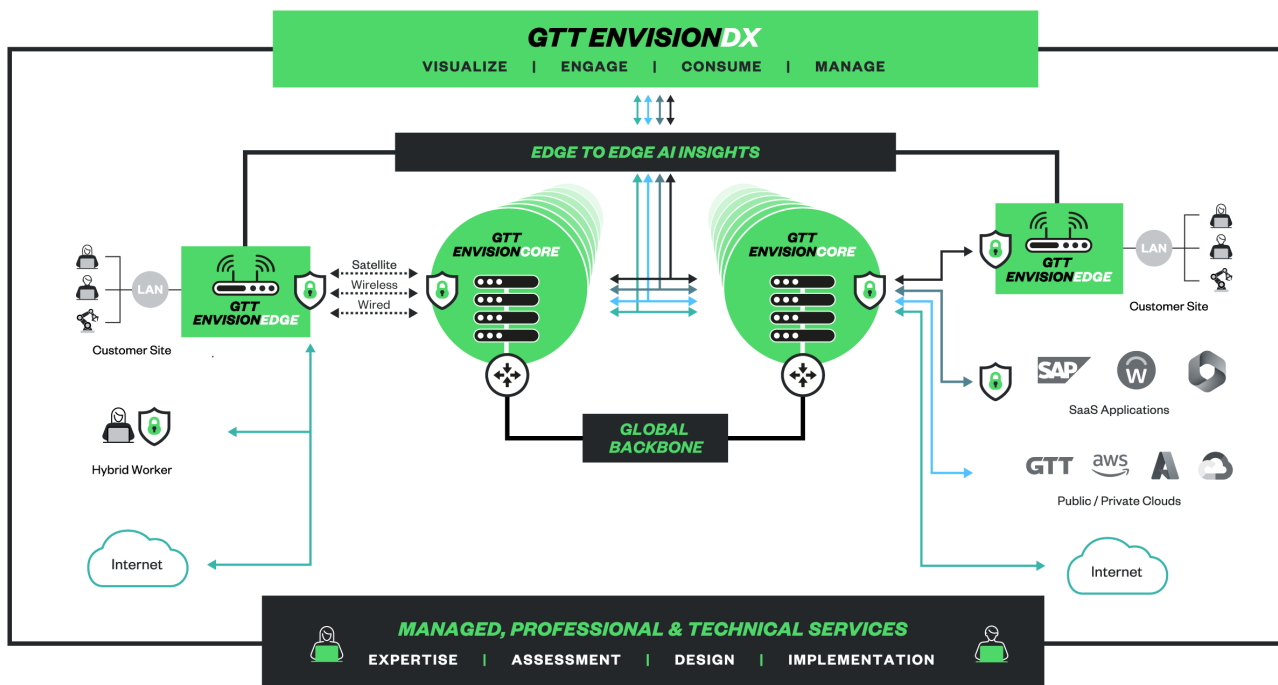

Businesses shouldn't have to go to multiple suppliers to be able to connect, orchestrate, virtualize and automate their connectivity, network, security and cloud infrastructure. The ability to compose and consume their network when and how they want requires a nimble, agile partner with the expertise, tools and relationships needed to meet the demands of their organization.

SIMPLIFY EVERY ASPECT OF YOUR SECURITY AND NETWORK ASSESSMENT MANAGEMENT

GTT EnvisionDX places cloud networking at your fingertips as a single digital gateway to a better secure cloud networking experience that provides greater visibility, defined policies, application optimization, management of your solutions, and on-demand customization of your entire network, all in one place. GTT EnvisionDX supplies you with the security, observability, and control to monitor and manage your network performance, operationalize your business policies, and utilize data and insights to protect your business and employees.

90%
